### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided – *there may be more space than you need.*
- You must **show all your working.**
- Diagrams are **NOT** accurately drawn, unless otherwise indicated.
- **Calculators may be used.**
- If your calculator does not have a  $\pi$  button, take the value of  $\pi$  to be 3.142 unless the question instructs otherwise.

### Information

- The total mark for this paper is 80
- The marks for **each** question are shown in brackets – *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

3 The table shows some information about the dress sizes of 25 women.

Dress size	Number of women

10	9
12	8
14	6

(a) Find the median dress size.

12  
 (1)    Q03a

3 of the 25 women have a shoe size of 7

Zoe says that if you choose at random one of the 25 women, the probability that she has either a shoe size of 7 or a dress size of 14 is  $\frac{9}{25}$  because

$$\frac{3}{25} + \frac{6}{25} = \frac{9}{25}$$

(b) Is Zoe correct?  
 You must give a reason for your answer.

Yes because ~~she wants the probability~~ the events are not dependent on each other. They're independant.

Q04

$\frac{2}{7}$  of the cakes are vanilla cakes.

35% of the cakes are banana cakes.

The ratio of the number of lemon cakes to the number of chocolate cakes is 4:5

Work out the number of lemon cakes Daniel bakes.

$$\frac{2}{7} \times 420 = \frac{2}{7} \times 420 = 120 \text{ cakes} = \text{vanilla}$$

$$420 \times 35\% = 147 \text{ cakes} = \text{banana}$$

$$\text{Interior angles} = (n-2) \times 180$$

$$\cancel{(12-2) \times 180} = 190^\circ \quad (12-2) \times 180 = 1800^\circ$$

$$1800 \div 12 = \underline{\underline{150^\circ \text{ each}}}$$

Angles around a point = 360

$$360 - \overset{150}{\cancel{150}} - 90 = \boxed{120^\circ} = \text{interior angle polygon P}$$

Interior angles in hexagon =

6 The density of apple juice is 1.05 grams per cm<sup>3</sup>.

The density of fruit syrup is 1.4 grams per cm<sup>3</sup>.

The density of carbonated water is 0.99 grams per cm<sup>3</sup>.

25 cm<sup>3</sup> of apple juice are mixed with 15 cm<sup>3</sup> of fruit syrup and 280 cm<sup>3</sup> of carbonated water to make a drink with a volume of 320 cm<sup>3</sup>.

Work out the density of the drink.

Give your answer correct to 2 decimal places.
